The elevator

Next time you are in a lift, look for the name of the people who made it. Chances are it will be the Otis Elevator Company. It was Elisha Otis who invented the gadget that made the modern passenger lift possible. The concept of elevation was already well established. Louis XV of France disliked stairs so much that he was regularly hoisted skywards in a 'flying chair' by several strong men hauling on ropes. In Otis's time, warehouses commonly used moving platforms to transport goods between floors. However, elevating anything further than one floor or weighing more than 70 kilograms would have been considered far too dangerous.

Otis worked for a bed manufacturer who was keen to expand his business but needed to find a way to move his beds to an upper floor for storage. The inventive Otis soon had a solution to the safety problem: a tough steel spring system that meshed with ratchets on either side of the lift shaft so that if the rope gave way the sudden loss of tension would trigger the device, stopping the lift from falling.

At the 1854 World Trade fair in New York, Otis unveiled his invention and orders began to pour in, including one from the United States Assay Office which at that time was constructing one of the first buildings with an internal steel frame to support the exterior walls. This was the same construction method that skyscrapers would use. If not for lifts, the towering landmarks which feature so prominently in today's architecture would have been impossible and the character of our cities would be entirely different.

1. Elisha Otis came up with the idea that made elevators safe for people.

2. Louis XV was lifted into the air by men pulling ropes.

3. Warehouses in Otis's time used boxes to move their goods to different levels.

4. Otis's boss wanted to move beds to a higher level for delivery.

5. Otis made his springs out of plastic.

6. The ratchets were located on the inside of the lift.

7. If a rope became slack this activated the contraption.

8. The US Assay Office building had its support structure on the outside.

9. The US Assay Office used a similar building technique to today's tall buildings.

10. The writer believes that skyscrapers can help you find your way around a city.
